Core-Connect: AI-Powered Payroll Verification

Problem: Government Salary Fraud

Nigeria loses 50+ billion naira annually to payroll fraud. Ghost employees, sanctioned individuals, and fraudulent identities drain public funds while legitimate employees don't receive salaries.

Solution: AI-Powered Verification + Squad API

Core-Connect prevents fraud BEFORE transfer by combining AI-driven signals with real payment infrastructure. Multi-dimensional risk scoring flags high-risk employees in real-time.

Four Pillars of Verification

1. Identity Verification: BVN + name matching (Levenshtein distance)
2. Financial Verification: Squad API /payout/account/lookup validates account holder
3. Compliance Screening: OFAC/UN sanctions check blocks dangerous individuals
4. Risk Scoring: AI engine calculates Squad Trust Score (0-1000) for decision-making

Squad APIs Used

POST /payout/account/lookup - Verify account name before payment
POST /payout/transfer - Execute verified salary transfer with audit trail

Key Features

- Dashboard: Real-time risk overview, department-level heatmap
- Employee verification: STS scoring and 5-tier verdict system
- Credential forensics: AI-powered document verification
- Payment execution: Live Squad API integration
- Audit trail: Immutable transaction log for compliance

Status: MVP production-ready, scales to 1M+ employees
Built for: Osun State Government
Technology: Next.js, Squad API, OFAC/UN data, AI verification engine
